You're invited to a

COMMUNITY
WORKSHOP

Identify And Protect Cecil County's Green Infrastructure Network!

Green infrastructure is our county's natural life support system, forests, wetlands, and floodplains, which includes parks, open spaces, and farms. These places support native species, sustain air and water resources, and contribute to people's health and quality of life. Identifying and protecting a green infrastructure network can improve our capacity to manage stormwater runoff/flooding and enhance recreational opportunities.

December 5th from 5:30 - 8:30 PM

Join us for an engaging workshop for citizens to share ideas and guide the development of our Green Infrastructure Plan

Cecil County Administration Building, Elk Room
200 Chesapeake Blvd, Elkton, MD 21921
